Kirk-Rudy's 203P system attaches a wide variety of cards and pre-packaged samples onto various mailers and inserts using quick-setting hot melt glue. An affordable alternative to high priced attaching systems, the KR 203P System is ideally suited for small to mid volume operations requiring quick set-up, ease of use and reliability. Hot melt glue is automatically applied to the media as it leaves the KR shuttle feeder. Cards or sample packs are accurately placed onto the media by the KR Pick and Place head. Where appropriate, peel-away adhesives permit product removal and easy clean-up. Use the optional dual hopper kit for placing two cards side by side or the plow fold station for in-line folding.
